

Tanium Guardian Privacy Datasheet

What Is Tanium Guardian?

Tanium Guardian offers alerts, insights, and remediation actions that leverage the real-time, seamless, and autonomous power of the Tanium XEM platform, enhancing the ability to respond quickly and effectively to critical and high-severity issues. It quickly surfaces information about the most sophisticated and stealthy vulnerabilities and provides direct access to detailed dashboards that deliver comprehensive insights, impact assessments, and targeted strategies for addressing these potential exploits.

What Data Privacy Issues Relate to Tanium Guardian?

Tanium Guardian collects machine information such as hostname, IP address, and vulnerability applicability from endpoints within the organization's environment.

What Types of Personal Data Does Guardian Detect?

Guardian collects endpoint information such as hostname, IP address, MAC addresses, and other personal information to determine if a device is vulnerable to specific vulnerabilities.

When Might Guardian Identify Sensitive Data?

Guardian uses the Tanium Data Service (TDS) collection settings to determine when information about endpoints is gathered.

Does Guardian Store Personal Data?

Guardian may collect and store personal data, as described above. This data is stored on endpoints and in the TDS on the server. The Guardian Dashboards and Reports rely on data from TDS.

Who Can See the Data Viewed in Guardian?

Sensitive and/or personal data viewed in Guardian is only visible to users of Tanium Reporting that have access to the Guardian Dashboards and Reports.

Do Tanium Personnel Have Access to Personal or Sensitive Data Through the Guardian Console?

Under normal operations, only the organization's user has access to the Guardian console.
